

Skin marker for rodents

Skin and tail marker for albino and black mice

Product codes:

Reference: BIO-KN-297

Product description:

Marker with 2 tips (fine and broad) for quick and easy identification of rats and mice.

Recommended for albinos and black mice.

Optimum hold on skin (ear) and tail for short-term identification.

These pigments are non-toxic and free from any hazardous materials.

Less stressful for the animal and easier for the user.

Available in a range of colours: pink, light blue, violet, black and green.

Product features:

Available models
