

mouse skin training suture

This filigree suture pad allows incision and closure along the linea alba during abdominal procedures in the rat.

Product codes:

Reference: VTQ-SUT-PAD-MOU

Product description:

This suture pad faithfully reproduces the delicate structure of mouse skin. It allows gradual penetration through the skin and realistic layer-by-layer closure using surgical sutures, providing practical and effective suturing training.

This model is ideal for veterinary and biomedical facilities.

Our suture pads are reusable, tear-resistant, and retain their shape and texture even after repeated use.

Our practical stamp holder (S) can be used to mount suture stamps in a vertical or horizontal position, as required.

Product features:

Dimensions: 15 x 16 cm
